STATUS UPDATE No update yet.

Edit

DESCRIPTION lo...@gmail.com created issue #1

Awesome work you put into compose, I love it! After updating to beta01, I get the following error every now and then. I can't really say when exactly, but obviously it has something to do with the Jetpack Compose release version:

```
val compose_version = "1.0.0-beta01"
val compose_integration_version = "1.0.0-alpha08"

dependencies {
    ...

    implementation("androidx.compose.animation:animation:$compose_version")
    implementation("androidx.compose.compiler:compiler:$compose_version")
    implementation("androidx.compose.foundation:foundation:$compose_version")
    implementation("androidx.compose.material:material:$compose_version")
    implementation("androidx.compose.material:material-icons-extended:$compose_version")
    implementation("androidx.compose.runtime:runtime:$compose_version")
    implementation("androidx.compose.ui:ui:$compose_version")
    implementation("androidx.compose.ui:ui-tooling:$compose_version")

    implementation("androidx.navigation:navigation-compose:$compose_integration_version")
    implementation("androidx.paging:paging-compose:$compose_integration_version")

    ...
}
```

Android Studio Build:

Android Studio Arctic Fox | 2020.3.1 Canary 8  
Build #AI-203.7148.57.2031.7165533, built on February 23, 2021  
Runtime version: 11.0.8+10-b944.6842174 amd64  
VM: OpenJDK 64-Bit Server VM by N/A  
Windows 10 10.0  
GC: G1 Young Generation, G1 Old Generation  
Memory: 4096M  
Cores: 8  
Registry: external.system.auto.import.disabled=true  
Non-Bundled Plugins: Dart, io.flutter, com.squareup.sqldelight

## COMMENTS

**ba...@googlemail.com** <ba...@googlemail.com> [#2](#)

Same for me.

In my code i am using:

```

val saveableStateHolder = rememberSaveableStateHolder()
saveableStateHolder.SaveableStateProvider(it.hashCode()) {
    content(it)
}

```

Not sure if it is related. Not investigated the issue yet.

**lo...@gmail.com** <lo...@gmail.com> [#3](#)

I was able to narrow down the cause of my problem somewhat: for example, it occurs when the app is running and I modify a string literal in the editor.

**ex...@gmail.com** <ex...@gmail.com> [#4](#)

I get this in the "Rally" sample app. For example, if I edit the balance of the first account in RallyData.kt while the emulator has the app running. (Canary 8, Beta01, Kotlin 203-1.4.30-release-A:

**es...@google.com** <es...@google.com>

*Assigned to ac...@google.com.*

**ac...@google.com** <ac...@google.com> [#5](#)

This is caused by a recent Compose API rename. We should have a fix for the next canary.

**ac...@google.com** <ac...@google.com> [#6](#)

*Marked as fixed.*

Should be fixed as of C10

**mu...@gmail.com** <mu...@gmail.com> [#7](#)

Change to newest version for all dependencies in gradle model helped for me
