Fixed Bug P3 + Add Hotlist

STATUS UPDATE No update yet. Edit

DESCRIPTION dj...@fau.edu created issue #1

I teach a Mobile App Development course at Florida Atlantic University and I have over 80 students in the class and about 40% of the class has Macs and they are not able to test their code on th them have iPhones but they do want to learn how to program for Android - they recognize the market value and potential.

I also develop Android apps at the company I work for and I have confirmed that this function doesn't work under the emulator. I've confirmed that audio does get recorded but it is distorted or it Speech is not able to recognize. Also, all my developers in the company I work for have Macs too.

Same code works fine on Windows with Emulator there. I would really appreciate if you would consider looking into this issue. I will be happy to work with who ever looks into this problem.

IMPORTANT: Please read <https://developer.android.com/studio/report-bugs.html> carefully and supply all required information.

Studio Build: 3.6.2
Version of Gradle Plugin: 3.6.2
Version of Gradle: 6.1.1
Version of Java: 1.8
OS: Mac OS 10.15.4

gradle -version

Gradle 6.1.1

Build time: 2020-01-24 22:30:24 UTC
Revision: a8c3750babb99d1894378073499d6716a1a1fa5d

Kotlin: 1.3.61
Groovy: 2.5.8
Ant: Apache Ant(TM) version 1.10.7 compiled on September 1 2019
JVM: 1.8.0_241 (Oracle Corporation 25.241-b07)
OS: Mac OS X 10.15.4 x86_64

Steps to Reproduce:
1.Enable Virtual Microphone uses Host Audio under Emulator Settings
2.Build and run sample code below
3.Click on mic and Say anything and it doesn't recognize the speech.

Run the same code on real device and it works fine.

Code:
// MainActivity.java
package com.example.hw7_2;

import android.content.ActivityNotFoundException;
import android.content.Intent;
import android.os.Bundle;
import android.speech.RecognizerIntent;
import android.view.View;
import android.widget.ImageView;
import android.widget.TextView;
import android.widget.Toast;

import androidx.appcompat.app.AppCompatActivity;

import java.util.ArrayList;
import java.util.Locale;

public class MainActivity extends AppCompatActivity {
 private final int REQ_CODE = 100;
 TextView textView;
 @Override
 protected void onCreate(Bundle savedInstanceState) {
 super.onCreate(savedInstanceState);
 setContentView(R.layout.activity_main);
 textView = findViewById(R.id.text);
 ImageView speak = findViewById(R.id.speak);

```

speak.setOnClickListener(new View.OnClickListener() {
    @Override
    public void onClick(View v) {
        Intent intent = new Intent(RecognizerIntent.ACTION_RECOGNIZE_SPEECH);
        intent.putExtra(RecognizerIntent.EXTRA_LANGUAGE_MODEL,
            RecognizerIntent.LANGUAGE_MODEL_FREE_FORM);
        intent.putExtra(RecognizerIntent.EXTRA_LANGUAGE, Locale.getDefault());
        intent.putExtra(RecognizerIntent.EXTRA_PROMPT, "Need to speak");
        try {
            startActivityForResult(intent, REQ_CODE);
        } catch (ActivityNotFoundException a) {
            Toast.makeText(getApplicationContext(),
                "Sorry your device not supported",
                Toast.LENGTH_SHORT).show();
        }
    }
});
}
@Override
protected void onActivityResult(int requestCode, int resultCode, Intent data) {
    super.onActivityResult(requestCode, resultCode, data);
    switch (requestCode) {
        case REQ_CODE: {
            if (resultCode == RESULT_OK && null != data) {
                ArrayList result = data
                    .getStringArrayListExtra(RecognizerIntent.EXTRA_RESULTS);
                assert result != null;
                textView.setText((String)result.get(0));
            }
            break;
        }
        default:
            throw new IllegalStateException("Unexpected value: " + requestCode);
    }
}
}
}

```

```

Hi, have you tried the above steps (incl. enabling host audio microphone) but with the laptop open and the sound input device set to default (built-in mic)?
- [Deleted User]** <[Deleted User]> [#3](#)

Yes, I have tried that - have proven that audio gets recorded but it is distorted. The speech engine sometimes reco's some weird results. As a test, I installed a couple of audio recorder apps emulator and that's how I was able to tell that the audio was garbled. The code runs fine on the actual device. The problem is that I have a lot of students that have Mac's and I teach Android the students don't have actual android devices so we have to use the emulator.
- dj...@fau.edu** <dj...@fau.edu> [#4](#)

Sorry, meant to put this using my academic id. I also work in the industry and we are using speech reco extensively too using android as well and I see the problem on the simulator there as
- If...@google.com** <lf...@google.com> [#5](#)

Can you try running with the emulator here:
<https://drive.google.com/open?id=17B0Ws9QyPxElzttby3L00h0Tuim1bQOs>
which prints more debug info about audio on startup?

Message last modified on Apr 22, 2020 07:26AM
- dj...@fau.edu** <dj...@fau.edu> [#6](#)

Hi, I have figured out where to place the emulator and I keep getting macOS cannot verify that this app is free from malware. cannot be opened because the developer cannot be verified.

I tried disabling that under system settings, Security & Privacy, General, Allow apps downloaded from: and the options are grayed out. App Store and identified developers is selected by default from work prevents me from changing this.

I'm currently manually opening each of the exe and dll's and telling it is ok. Keep you posted.
If you have a better way of doing this, please let me know.
- dj...@fau.edu** <dj...@fau.edu> [#7](#)

ok, I got the sim running by manually opening each exe and dll that popped up when I tried to run the sim. that was nuts. took me a good 15 min of manually finding and opening each dll.

Here is the log, rebooting the simulator:

#7: Thanks so much for trying this! Can we also see the logs on the host side that contain the newly added prints? You can run the emulator from command line and pipe them all to a file:

[Deleted User] <[Deleted User]> [#11](#)

Thanks for giving me that info. Here is the output from the emulator. I made sure that I had the proper mic enabled, etc on the setting page like before. Looks like audio was recorded but then before as well. Do you have any settings that can be enabled that will record the audio? I think the audio is getting uploaded to google somewhere. Is there somewhere we can get to it so we can record or see what recording settings are at?

```

dj...@fau.edu <dj...@fau.edu> [#12](#)

BTW, the message "emulator: Revoking microphone permissions for Google App." comes up way before I run my app. That's probably coming from a different app on my emulator. No mess my app.

If...@google.com <If...@google.com> [#13](#)

Wow, thanks so much for this! This seems to be the issue:

```
coreaudio_get_voice:169 found property data. isInput? 1
coreaudio_print_device_name:130 CoreAudio device name: External Microphone
coreaudio_get_voice:194 goto default exit: query err: 0 transport type bt? 1 btle 1
coreaudio_init_base:745 stream basic description: isInput? 1 formatId: 1819304813 flags: 9 samplerate:
48000.000000 ch per frame: 1 bytes per frame: 4 frames per packet: 1 bytes per packet: 4
```

- Is there actually an external microphone attached or are we using the built-in microphone to the laptop? Can you also try the built-in mic if there was an external one (go to Preferences > select Built-in)
- The real problem: sample rate is 48000.000000 while the emulator expects exactly 44100.000000. We may be able to deal with this by using Apple's real time converter libraries, but will

dj...@fau.edu <dj...@fau.edu> [#14](#)

That explains what I was seeing, the frequency is slightly off which explains why sometimes it picks up random words instead of rejecting them completely. I looked in my Audio Midi Setup and Mic Audio Format setting is set to 44100, so I'm thinking that somehow the code in the emulator is changing it to 48000. I wonder if there is some ini or config file that changes default init parameters?

Here is some info that could be useful that I found - you probably already have this info.

https://developer.apple.com/documentation/avfoundation/audio_track_engineering/audio_settings_and_formats
<https://stackoverflow.com/questions/48091631/what-are-the-valid-settings-key-values-for-avaudiorecorder>

Is there anything else I can help with? Is this code opensource by any chance and if so where can I look at it? I can maybe help to look through. Years ago I used to do operating systems support for customers.

In any case, I'm very hopeful we can get to a fix here and really appreciate your help. This will really help me when I teach the class again next semester.

If...@google.com <If...@google.com> [#15](#)

#14: The emulator isn't changing the sample rate; 48000 is what macos is reporting. In fact, the emulator doesn't have the capability to change it, because right after that print, the emulator sets the sample rate to 44100 (with evidently no effect).

If...@google.com <If...@google.com> [#16](#)

The code is opensource and is here: <https://android.googlesource.com/platform/external/qemu/+refs/heads/emu-master-dev/audio/coreaudio.c#720>

Thanks very much for your interest in it; the idea we have for the fix would be to use https://developer.apple.com/documentation/audiotoolbox/audio_converter_services if it turned out get_something other than 44100.

dj...@fau.edu <dj...@fau.edu> [#17](#)

Sounds like a good approach, but I do have a question. Is the debug output before or after the call to `coreaudio_set_streamformat()`. Would it make sense to. have some debug output showing the value before and after the call, just to confirm ? Maybe the audio driver is changing it to the next closest frequency ?

```
/* set Samplerate */
core->streamBasicDescription.mSampleRate = (Float64) as->freq;
status = coreaudio_set_streamformat(core->deviceId,
                                   &core->streamBasicDescription,
                                   isInput);

if (status != kAudioHardwareNoError) {
    coreaudio_logerr2 (status, typ, "Could not set samplerate %d\n",
                      as->freq);
    core->deviceId = kAudioDeviceUnknown;
    return -1;
}
```

If...@google.com <If...@google.com> [#18](#)

#17: The debug output is before the call to `set_streamformat`; I've also tried printing after the call and it doesn't seem to have an effect.

dj...@fau.edu <dj...@fau.edu> [#19](#)

Interesting, so if it is before the call, doesn't that mean that it is setting it to the wrong value ? shouldn't `as->freq` be coming in as 44100 ? Sorry if I'm bugging you too much. Just trying to help.

If...@google.com <If...@google.com> [#20](#)

#19: No, the emulator never sets the value; it's populated by macos, so it's macos that's setting it to 44100 or 48000.

Message last modified on Apr 24, 2020 03:11AM

If...@google.com <If...@google.com> [#21](#)

To be clear, the print is also before this line:

```
core->streamBasicDescription.mSampleRate = (Float64) as->freq;
```

dj...@fau.edu <dj...@fau.edu> [#22](#)

Ok, thanks.

dj...@fau.edu <dj...@fau.edu> [#23](#)

I have some updates. I ran the sim again with the mac mic and also ran audio midi setup and set the Format to 44,100, it showed as being 48000 yesterday. The difference is that I don't thin Unfortunately , same result though.

```
[~/Library/Android/sdk/emulator]$ emulator -avd Pixel_3_API_29 2>&1 | tee hostLogs2.txt

```

I also installed an audio recorder program on the android simulator and was able to save the file. attached here. I've analyzed it and I can't tell if it's 44k or 48k. It's not exactly sure what it is

I also included a screen shot of the audio-midi-mac audio setup and created a recording file with the Mac Memo app and saved the audio - sounds perfectly clear.

I hope this gives some more info. Not sure how it helps though - sorry. I'll keep thinking from my side. Let me know if there is anything else from your side.

Fix is merged here: <https://android-review.googlesource.com/c/platform/external/qemu/+1566547> and should go out in the next canary.

You can try it early on ci.android.com:

https://ci.android.com/builds/submitted/7117578/sdk_tools_mac/latest/sdk-repo-darwin-emulator-7117578.zip

Note that you still need to toggle on "virtual headset uses host audio" in the extended controls > Microphone page.
