 DESCRIPTION

fr...@google.com created issue [#1](#)

Oct 20, 2023 06:08AM

I could probably use some help figuring out exactly *what* I'm asking for here.

My specific use-case is wanting to build variant-specific (debug/release) native JNI libraries and have the unitTests for those variants depend on those libraries and add them to the `java.library.path` for the tests.

My first thought was something like this:

```
androidComponentsExtension.onVariants { variant ->
    variant.unitTest?.testOptions{ test: org.gradle.api.tasks.testing.Test ->
        test.systemProperty("java.library.path",...)
        test.dependsOn(buildNativeJNILibraryTask)
    }
}
```

But there's probably other ways that this could be enabled.
