Edit

📄 DESCRIPTION

ap...@gtempaccount.com created issue #1

The new androidx.core:core-splashscreen:1.0.0-alpha02 is crashing android 9 devices (leads to a direct reboot) - reproducible by implementing the new splash screen according to the official gu

*https://developer.android.com/guide/topics/ui/splash-screen/migrate

Steps to reproduce

- Target/compileSDK 31

- Add dependency

- Create splash screen theme in styles.xml

- Add style to main/launch activity

- Add installSplashScreen() to said activity

- Run on Android 9 device/emulator

" ...re is not autofit setting, your icon should follow the adaptive icon ➡ guidelines If you are using an adaptive icon for your launcher icon, then using the foreground of the adaptive icon as the the sp

COMMENTS

All

👤 al...@google.com <al...@google.com>

Reassigned to ca...@google.com.

👤 ca...@google.com <ca...@google.com> #2

Can you please share the logcat of the device when the crash happens?

👤 ap...@gtempaccount.com <ap...@gtempaccount.com> #3

no crashes in the play console, the entire device just reboots, also reproducible in emulator

👤 ca...@google.com <ca...@google.com> #4

Not necessarily in the play console but at least on logcat. Even you don't see anything relevant, it would be helpful to share the logs of adb logcat -s "*" :E that happen right before the crash.

You can also take a bug report and attach it to the bug.

👤 ca...@google.com <ca...@google.com> #5

Status: Won't Fix (Infeasible)

Closing because of missing details about the crash.

👤 ap...@gtempaccount.com <ap...@gtempaccount.com> #6

Did you try to reproduce?

*https://developer.android.com/guide/topics/ui/splash-screen/migrate

Steps to reproduce

- Target/compileSDK 31

- Add dependency

- Create splash screen theme in styles.xml

- Add style to main/launch activity

- Add installSplashScreen() to said activity

- Run on Android 9 device/emulator

👤 ap...@gtempaccount.com <ap...@gtempaccount.com> #7

style was this, set for launch activity in manifest

```
<style name="SplashTheme" parent="Theme.SplashScreen">
  <item name="windowSplashScreenBackground">@color/colorPrimary</item>
  <item name="postSplashScreenTheme">@style/AppTheme</item>
</style>
```

Logcat (Android 9 Emulator, first install, debug)

ca...@google.com <ca...@google.com> [#8](#)

Status: Assigned (reopened)

I don't see any crash in the log, is it missing something at the beginning.

Can you please take a full bug report after the crash?

I didn't manage to reproduce. Do you have a sample project to help us reproduce the bug?
At least with the styles and Activity that are causing the crash to happen.

ca...@google.com <ca...@google.com> [#9](#)

Marked as fixed.

I managed to repro, and this is fixed in `core-splashscreen:1.0.0-beta01`.

ap...@gtempaccount.com <ap...@gtempaccount.com> [#10](#)

I stated before that there is no crash in the log, on debug the device just reboots, see
2022-01-18 21:56:31.548 6882-6907/? E/AndroidRuntime: FATAL EXCEPTION: ImpressionsTracker-0
Process: com.google.android.apps.docs, PID: 6882

Glad to here there seems to be a fix, i will check out the beta :)

ap...@gtempaccount.com <ap...@gtempaccount.com> [#11](#)

Sadly still not working - now the splashscreen is shown (although not with the actual logo but only with the default android placeholder) but the app is still not opening, heres the crash

using the current 1.0.0-beta01

style is still the one posted above, the postSplashScreenTheme is a descendant of Theme.AppCompat.Light.NoActionBar

Message last modified on Jan 25, 2022 04:45AM

ca...@google.com <ca...@google.com> [#12](#)

Did you call `installSplashScreen()` before `super.onCreate()`?

Can you share your manifest and themes files?

ca...@google.com <ca...@google.com> [#13](#)

although not with the actual logo but only with the default android placeholder

That's because you didn't set `windowSplashScreenAnimatedIcon`, at least in comment#7

Message last modified on Jan 25, 2022 05:01AM

ap...@gtempaccount.com <ap...@gtempaccount.com> [#14](#)

yea that was it, i had installSplashscreen after the super.onCreate thanks a lot!

EDITED: sorry for the false negative before, i sometimes have issues with android studio not rebuilding correctly (mixing up ressources, cache etc.)

`windowSplashScreenAnimatedIcon`
isnt the app icon (from manifest) the default?

Message last modified on Jan 25, 2022 08:46PM

ca...@google.com <ca...@google.com> [#15](#)

Thanks for checking.

`windowSplashScreenAnimatedIcon`
isnt the app icon (from manifest) the default?

Unfortunately no, because there is no way to read the manifest from the theme file or tell the system to do so, and there is no default theme attribute pointing to the launcher icon.

To help me debug, can you please check if the issue arises when the `android:theme="@style/SplashTheme"` is used on the `<application>` tag?

Message last modified on Jan 25, 2022 08:31PM

ap...@gtempaccount.com <ap...@gtempaccount.com> [#16](#)

I see, so how do i get the icon then, i only have foreground/background.xml or can i use mipmap?

EDIT: mipmap seems so work, but the scale is off, is there an autofit setting?

Message last modified on Jan 25, 2022 08:54PM

ca...@google.com <ca...@google.com> [#17](#)

No there is not autofit setting, your icon should follow the adaptive icon [↔guidelines](#) If you are using an adaptive icon for your launcher icon, then using the foreground of the adaptive icon :
