Can't Repro   Bug   P2   + Add Hotlist   NeedsInfo

👥 **STATUS UPDATE** No update yet.   Edit

📄 **DESCRIPTION** lu...@gmail.com created issue #1

Compile the dynamic features project with r8, the release step is stuck:
gradle version：7.3.2
agp version: 7.0.4
as version:2021.2.1 patch 1

When compiling the release installation package, minifyEnabled=true, when I use -dontoptimize, the compilation can pass, remove -dontoptimize, the compilation is stuck, the log is as follows:
(Tips: This is a large project, when I use the demo test, this problem will not be reproduced，And I hope r8 can print some exception logs to locate the problem)

WARNING:/Users/user/xhsProject/redMain1/app/build/intermediates/module_and_runtime_deps_classes/TESTLiteRelease/base.jar: R8: Expected stack map table for method with non-linear c
WARNING:/Users/user/xhsProject/redMain1/app/build/intermediates/module_and_runtime_deps_classes/TESTLiteRelease/base.jar: R8: Expected stack map table for method with non-linear c

COMMENTS

ri...@google.com <ri...@google.com> #2
Reassigned to ri...@google.com.

Is it possible for you to share a dump of your inputs? see https://r8.googlesource.com/r8/+/refs/heads/main/doc/compilerdump.md on how to do that
If not publicly, then with ricow@google.com and clementbera@google.com

If that is not possible, could you try to do jstack (https://docs.oracle.com/javase/7/docs/technotes/tools/share/jstack.html) on the hanging process while it is hanging and post those stacks

lu...@gmail.com <lu...@gmail.com> #3

Thanks!
The dump file is too large to send by email!
This is the stack information exported using the jstack tool：

ri...@google.com <ri...@google.com> #4

1. If you are willing to share the dump using e.g., google drive, then that will certainly help diagnose this

2. You are using a relatively old version of R8 here, what happens if you use a more recent version, e.g. you can do the following

```
pluginManagement {
    buildscript {
        repositories {
            mavenCentral()
            maven {
                url = uri("https://storage.googleapis.com/r8-releases/raw")
            }
        }
        dependencies {
            classpath("com.android.tools:r8:3.3.67")
        }
    }
}
```

I will take a look at the stacks

ri...@google.com <ri...@google.com> #5

In your original post it was stated that you use agp version 7.0.4. Are you using a different R8? (using something similar to #4) - because retracing gives a stack that does not make much ser

---

lu...@gmail.com <lu...@gmail.com> #6

I am not use a different r8 .
I will try version 3.3.67 and I will reply if there are results

---

lu...@gmail.com <lu...@gmail.com> #7

Thanks, version 3.3.67 works ok!
But a crash occurs when the app is running
Some kotlin code is compiled as follows: (The contents of the constructor are replaced with 'throw null')

/* compiled from: MemoryConfig.kt */
/* loaded from: classes4.dex */
public final class p extends q {
  @SerializedName(ResultAgent.STATE_COMPLETE)
  private float completeLevel;
  @SerializedName("critical")
  private float criticalLevel;
  @SerializedName(Constants.LOW)
  private float lowLevel;
  @SerializedName("normal")
  private final float normalLevel;

  public p() {
    throw null;
  }
...
}

Message last modified on Jun 29, 2022 10:16PM

ri...@google.com <ri...@google.com> #8

Reassigned to ch...@google.com.

That would normally only be the case if the class is only instantiated by reflection through that constructor:
 - Are you running R8 in full mode?
 - If you do, this could be that the parent constructor would always throw
 - Could also be that we inlined the constructor and then a reflective call is using it, can you print the stack of the crash
 - Are there any warnings in the output regarding this class, if it does not typecheck we might do this.
 - Does your program have an actual call to this constructor
 - Can you share the resulting apk (as as specified before, even better, share a dump, in which case this is way easier for us)
 If you using gson keep rules that are in the r8 faq on this, could you try adding
-if class * {
  @com.google.gson.annotations.SerializedName <fields>;
}
-keep,allowobfuscation class <1> {
  void <init>();
}

ri...@google.com <ri...@google.com> #8

Reassigned to ch...@google.com.

That would normally only be the case if the class is only instantiated by reflection through that constructor:
 - Are you running R8 in full mode?
 - If you do, this could be that the parent constructor would always throw
 - Could also be that we inlined the constructor and then a reflective call is using it, can you print the stack of the crash
 - Are there any warnings in the output regarding this class, if it does not typecheck we might do this.
 - Does your program have an actual call to this constructor
