Hi!
A tryied to build ndk-samples from github https://github.com/android/ndk-samples
And I have error in gradle sync(attached file).
russian text in files means "The system cannot find the path specified."

Gradle version 5.4.1
Android Plugin Version - 3.5.2
Compile SDK Version - 28
Build Tools Version -28.0.3
SDK Tools version - 23???. I don't have tab "Tools->SDK MAnager"

My opinion - the problem is in backslashes and forwardslashes. But I have no idea how to fix it.

Can you try Android Studio 3.6.0 with Android Gradle Plugin 3.6.0? And what version of CMake are you using?

a....@gmail.com <a....@gmail.com> #4

same problem.
cmake version - 3.10.2.4988404

---

ar...@google.com <ar...@google.com> #5

It's hard for us to see what the problem might be here. Can you try:

- Remove .cxx directory under your app directory?
- Is your SDK in D: drive, is that a network drive?
- Can you try creating a new project with the sample?

Also did you by any chance renamed your SDK directory name after you installed it?

---

a....@gmail.com <a....@gmail.com> #6

D: drive is not a network drive

-> Remove .cxx directory under your app directory?
same problem

-> Can you try creating a new project with the sample?
I create new project - same error.

-> Also did you by any chance renamed your SDK directory name after you installed it?
100% no, because I fully reinstall Android Studio and SDK.

Thanks for trying ninja. Can you also try running the cmake command from your `build-commands.txt` file manually?

Hi, can you try with an updated version of CMake? For example CMake 3.16?

We suspect this might be something related to codepage. Is there any chance that you have changed the default code page of cmd.exe?

-> https://ci.android.com/builds/branches/aosp-ndk-release-r21/grid? also has the pending r21c release. The 6468398 build should have the compiler with the fix for Windows network path

comment #6. It is not network drive.

-> Can you try building using NDK20 to see if it reproduces? (the aforementioned bug only happens for NDK21 and we are working on it).

I click "invalidate cache and restart" and set ndk20.

20.1.5948944 - same error :(

21.0.6113669, 21.1.6352462 - also the same error.

The fix is only available in the `6468398` build. I know that wasn't available on Linux when I posted the earlier message, but it does seem to be there now. Please try that one and let us know if

Linux? I use Windows 10.
I Download it and unpack.
Also the same error

I thought so too.
 but ld really launched and creates executable file
Sorry, I can't attach all file in public for security reasons

Oh, you will not believe this...

I noticed one thing: If I run `cmd.exe /C "cd . && echo 1"` on computer with this error - then it writes

```
1
The system cannot find the path specified.
```

On other computers, that have successfully gradle sync, output was `1` without `The system cannot find the path specified.`

The problem was in value `HKEY_CURRENT_USER\Software\Microsoft\Command Processor\Autorun`. It must be executed(in my case it was `"D:\PentestBox\vendor\conemu-maximus5\C`

Thanks for your help! Issue can be closed.
